

# Look After the Environment

We humans are wrecking the environment. This needs to stop or we could harm our nature or worse, wipe it out altogether.

## LITTER

Instead of throwing our litter in the bin, the majority of people throw it onto the ground or into rivers. This needs to stop, we are ruining our nature and wildlife habitats with rubbish. To help stop this, we can throw our rubbish away in the bin and go on litter picking trips. If you want to help, you can pick up any litter you find and put it in the nearby council bins or wait until you get home to throw it away.

The majority of this litter is plastic, this makes the problem worse as plastic never properly dissolves as it only turns into micro-particals which winged animals then feed their young mistaking it for insects.
